- Use of the leisure facilities, i.e. pool, Jacuzzi, sauna, steam room
- Microsoft Software Assurance Vouchers can be redeemed against our Bootcamps

Prerequisites

Delegates attending this class will have attended our SharePoint 2010 Administrator Bootcamp or have equivalent knowledge and skills.

Prior to taking this course, students should have a general knowledge of networking concepts and a basic understanding of Windows SharePoint Services 3.0 and SharePoint Server 2007. Technically-oriented students are expected to understand and/or be able to perform the following administrative activities:

- DNS - Including ability to create alias records and records in the Hosts file.
- IIS - Create new Web sites, host headers, and work with site security.
- Active Directory Users and Computers - Create new user accounts, reset passwords, and perform general user and group account activities.
- SQL Server - Have a basic understanding of how to apply permissions to a database.
- Windows 2003 Server - Have a basic understanding of Active Directory.

- Networking - Have a basic understanding and the ability to assign IP addresses, host names, and general connectivity issues.

NOTE: Delegates attending this class must have attended a SharePoint 2010 Administrator Course or have been working as an Administrator for SharePoint 2010 for a minimum of 6 months.

Day 1

Architecture Model – Platform / IIS / SharePoint – Level 200

Installation and Farm Configuration – Level 300/400 (requires AD / IIS / SQL knowledge) – We will take a new Server all the way through from installation to farm configuration and initial service applications for a base farm so a lot to cover here.

Day 2

Working in SQL for Creating and Managing SharePoint Databases – Level 300

Deep Dive Web Applications – Level 300 / 400

Designing Site Collections including Multi Tenancy – Level 400

Day 3

Extranets – Building SharePoint Web Applications to Support SSL and Multiple Authentication types – level 300/400

Scaling Out – Adding multiple Servers to the SharePoint Farm and Load Balancing the Web Front Ends – level 400

Publishing Application Services Between Farms – Level 300

Day 4

Working with Managed MetaData and Enterprise Content Types – level 300/400

Document Management including rights management – level 300

Records Management and Compliancy – level 300/400

Day 5

MySites and Social Networking including Multiple Farm configurations– Level 300

Configuring, Managing and Scaling Out Search – Level 400
