

## How to use the Dataform WebPart with SharePoint Designer 2007

This 4 hour online course explains how to use data views and data forms to present and configure data sources. You will see how to work with data sources to add data to SharePoint pages and manipulate the data display using custom queries and conditional formatting. This module also explains how to write data back to the data source using Data Form Web Parts. This session covers the following topics:

- Create a data view
- Import fields
- Conditional formatting
- Edit XPath expressions
- Apply filtering and style
- Edit, delete, and insert commands
